

Cuddlès™

BY ACCUTECH

The original nurse-friendly infant protection system

Accutech's Cuddles infant protection system combines patented tags and bracelets with advanced RFID technology to help prevent abductions while also helping to ensure the general safety and security of infants. Easy-to-use hardware and software work seamlessly, enabling nurses to spend less time managing a "system" and more time focusing on what matters most—caring for their little patients.

System features:

- Mother/baby match
- Multiple-floor monitoring capability
- Unique patient-to-floor transfer
- Low-interference 418 MHz frequency
- Full spectrum of upgradeable security platforms
- Tag supervision
- Loiter, door-ajar and supervisor notification
- Dual-conditioning to prevent false alarms
- Alarm information with complete history
- Complete fire panel interfacing with NFPA magnetic door locks

Key benefits:

- Quick patient assignment
- Simple report generation
- Option of corporate, government and GPO pricing
- Fulfillment of FCC, NFPA, NEC and UL requirements
- Free 24-hour technical support
- One-year, non-prorated warranty on all parts and services
- Free on-site training and software updates

Soft Bracelet

For safety and comfort

The Cuddles Soft Bracelet is a light-weight, non-allergenic, self-adjusting band that fits snugly and comfortably around the ankle or wrist. Made of an ultra-soft polyester blend, the bracelet won't cut or chafe the skin, and won't fall off due to movement or changes in weight.

In the event of removal or cutting, the Soft Bracelet immediately activates an alarm—preventing abductions and ensuring the continued safety and security of the infant wearing it.

Infant Tag

Designed to fit your smallest patients

Our RFID-enabled Infant Tag lets you know that every infant under your care is safe. Each tag is uniquely identifiable, giving you the ability to instantly match mother and baby.

A red, pulsating LED serves as a continuous visual indication that the tag is active. The tag can be turned on or off at any time to conserve battery power. If the tag is cut off or tampered with, it immediately locks down the perimeter and/or activates an alarm to alert staff.

Our new design means greater comfort for the infant and easier cleaning for the nurse. The tag's small size and light-weight construction mean it will never hinder the infant's movement.

The growing need for infant security

It's an unfortunate reality: infant abductions in hospitals are on the rise. In fact, hospitals now warn new parents to be aware of possible attempts. With nursing shortages impacting many facilities, 24-hour vigilance is simply not feasible without a reliable infant protection system in place.

Accutech's Cuddles system, deployed in the maternity ward and delivery areas of your hospital, provides the level of security you need for complete peace of mind.

Self-Guided Software

Easy to use and free to update

Our easy-to-use software enables you to activate tags, admit and discharge patients and generate reports more simply and quickly than ever before. No enrollment is necessary for instant protection, and on-site staff training can be completed in minutes

Multi-floor monitoring capabilities are available, and the software can be updated for free to ensure that you're always operating with the latest features and benefits.

Secure Tag Activator/Deactivator

Maximum control at minimum cost

By enabling you to turn tags on and off based on usage, our STAD extends tag life and lowers the total cost of ownership of your system. The device provides universal activation capabilities, secured with unique user codes.

Small, portable and easy to use, our STAD features a streamlined design with an integrated touch keypad interface.

Complete System Features

Cuddles BR 4200 System

No enrollment needed for instant perimeter protection

On-site end-user training

Modular design—easy installation and upgrades

Low-battery notification

Not computer dependent

Quick patient assignment

Can be wired to backup power

Easy report generation

418 MHz frequency

Alarm information with complete history of activation

Filtered data to help prevent false alarms

Windows-based software with password protection

Reusable, water-resistant tags

Multiple-floor monitoring capability

Portable STAD units to control tag functions

Unique patient-to-floor transfer

Patient loiter, door-ajar and equipment problem notification

Tag supervision

Double-conditioning door alarm notification

Tamper-proof system

Complete fire panel interfacing with the use of NFPA magnetic door locks

Soft polyester-blend elastic band

Escort feature

Supports Soft Bracelet and Cut Band

Simple operation

Band removal notification

One-year warranty

“Our Cuddles system has always been very easy to use. Our parents just love the soft, stretchy bands because they provide exceptional comfort and security for their newborns. We would definitely recommend Accutech to other facilities.”

SALLY JOHNSON, DIRECTOR OF MATERNITY
